Forecast for Tuesday 18 Apr 2023

Weather: A dry day with banks of low cloud or fog affecting eastern hills during the morning. This lifting and clearing to leave a largely sunny day, but with a strengthening easterly breeze. Remaining dry and clear into the evening.

Chance of cloud-free hill tops above 800m: Greater than 95%, but 70% in the east until late morning.

Low Cloud and visibility: Western mountains likely remaining clear of low cloud through the day. Some fog banks may cover lower eastern hills early morning (generally to around 300-500m), but higher tops probably above the cloud. Very good visibility outside of cloud, with a slight haze.

Meteorologist's View

Low cloud covering eastern slopes in the morning may make for difficult navigation during any early ascents until late morning, when cloud is expected to lift and clear. Despite the strong sunshine (sunscreen required) the strength of the wind will make 'feels like' temperatures around freezing for much of the day on the highest ground in the park. The 'wind chill' effect worsens through the evening. With strengthening winds there will be widespread buffeting on higher areas as well as locally through cols and west of ridges.

Forecast for Wednesday 19 Apr 2023

Weather: Becoming mostly cloudy overnight, but remaining dry. Largely cloudy during the morning with a slight chance of a few spots of rain, then dry with increasing amounts of sunshine by the afternoon. Very blustery with a significant wind chill.

Maximum wind: Easterly 30-35mph, with gusts 45-50mph possible on major summits and some downslope valleys.

Chance of cloud-free hill tops above 800m: 40% in the morning in central and eastern areas, 80% in the west, increasing to greater than 95% everywhere by the afternoon.

Low Cloud and visibility: Areas of low cloud affecting mainly central and eastern slopes in the morning, with bases varying 400-800m. Cloud lifting clear of summits by midday and tending to thin and break up into the afternoon.

Temperature: **Valleys:** Plus 2 Celsius increasing Plus 15 Celsius.
At 800m: Plus 2 Celsius increasing Plus 5 Celsius.
Freezing level: 1000m, increasing above summits by mid-morning. 1000m again by very late evening.
